

Crazy Apes™ apricots are the biggest, earliest apricots coming out of California. Starting in late April, jump on these giant, early apricots for one of the biggest impulse buys in the produce section.

- Consumers love apricots because they are packed with nutrition and are only available during a small window. Plus, their size, color and flavor mark the beginning of summer.
- Crazy Apes are stuffed with Vitamin A, Vitamin C, Beta Carotene and fiber.
- Crazy Apes are hand-picked and hand-packed to minimize bruising and reduce shrink at retail.
- Our extra large apricots come early because they are grown in the micro-climate of the Panoche Hills in California's western Fresno County.
- Harvested and packed on global Gap Certified ranches - and stored at Primus certified facilities.
